

The RD8200® SG now works with iOS®

Radiodetection is pleased to announce that the RD8200SG now works with iOS, allowing iPhone® users to locate and map buried utilities simultaneously.

From November 13th 2024, you'll have access to the enhanced capabilities and user experience that iOS offers.

Explore what makes the RD8200SG trusted in the field:

- **Single Button Press:** Capture points with a single click.
- **No Tilt Required:** The RD8200SG automatically offsets the distance between the antenna and ground, eliminating the need to tilt back.
- **Rapid Data Transfer:** Points are quickly transferred via Bluetooth® Low Energy (BLE) to your mobile app.
- **App Flexibility:** Compatible with a variety of mobile apps, so you can choose the one that suits your needs.

No New Equipment Needed!

Simply upgrade your firmware on your RD8200SG using [RD Manager Online](#) on your PC or laptop. Once updated, you'll be able to seamlessly connect and use your RD8200SG with a range of compatible apps, including PointMan®, Subsurface Maps, and SiteRight.

How to change your Operating System

Want to see how it's done? Check out the quick video tutorial to learn how to change the Operating System on your RD8200SG.
